## Abstract

This table corresponds to the unified EoS of neutron star ( $npe\mu$ ) matter at zero temperature and  $\beta$ -equilibrium [1], which is obtained in the framework of Thomas-Fermi approximation and assuming geometrical symmetries for the Wigner-Seitz cells [2]. The covariant density functional NL3 is adopted [3].

## Nuclear Matter Properties<sup>1</sup>

|           | Quantity                                | Unit             |       |
|-----------|---|------------------|-------|
| $n_S$     | saturation density in symmetric matter  | $\text{fm}^{-3}$ | 0.148 |
| $E_0$     | binding energy per baryon at saturation | MeV              | 16.25 |
| $K$       | incompressibility                       | MeV              | 271.7 |
| $K'$      | skewness                                | MeV              | 204   |
| $J$       | symmetry energy                         | MeV              | 37.4  |
| $L$       | symmetry energy slope parameter         | MeV              | 118.6 |
| $K_{sym}$ | symmetry incompressibility              | MeV              | 101   |

## Neutron Star Properties<sup>1</sup>

|                   | Quantity  | Unit      |       |
|-------------------|---|-----------|-------|
| $M_{max}$         | maximum mass  | $M_{sun}$ | 2.77  |
| $M_{DU,\mu}$      | mass at DUrca threshold with $\mu^-$                          | $M_{sun}$ | 1.01  |
| $R_{M_{max}}$     | radius at maximum NS mass                                     | km        | 13.29 |
| $R_{1.4}$         | radius at 1.4 $M_{sun}$ NS mass                               | km        | 14.59 |
| $\tilde{\Lambda}$ | tidal deformability for GW170817 at a mass ratio of $q = 0.8$ |           | 1482  |

## eos.thermo

eos.thermo and the three grid defining files are ComPOSE standard data files and by definition available. In eos.thermo, five extra quantities are added, i.e.,  $d$ ,  $Z$ ,  $A$ ,  $R_d$ , and  $R_W$ . The quantity  $d$  refers to the geometry of the correspondent pasta phase, represented by an integer, with 0 for the uniform phase, 1-slabs, 2-rods, 3-droplets, -2-tubs, and -3-bubbles. The quantities  $Z$  and  $A$  represent the total proton and nucleon number enclosed within the Wigner-Seitz (WS) cell (for  $d = 1, 2$ , and  $-2$  a finite cell size  $a = 30$  fm is adopted), while  $R_d$  represents the droplet size and  $R_W$  the WS cell size.

|                             |      |
|-----------------------------|------|
| table dimension             | 1    |
| table type                  | 1    |
| total number of grid points | 1078 |

<sup>1</sup>0-values indicate, that the corresponding data is not provided.

Range and density (#) of the grid parameters:

|       | Quantity          | Unit             | min                       | max | #    |
|-------|-------------------|------------------|---------------------------|-----|------|
| T     | Temperature       | MeV              | 0                         | 0   | 1    |
| $n_b$ | Baryon Nr Density | $\text{fm}^{-3}$ | $7.58143 \times 10^{-11}$ | 2   | 1078 |
| $Y_q$ | Charge Fraction   |                  | 0                         | 0   | 1    |

T,  $n_b$ , and  $Y_q$  are stored in eos.t, eos.nb, and eos.yq, respectively.

### Further Available Data Files

Files and quantities listed in the following are provided beyond CompOSE's core requirements as outlined in Sec.4.2. of the CompOSE manual.

**eos.compo** : available

| index            | particle |
|------------------|----------|
| 10               | $n$      |
| 11               | $p$      |
| 0                | $e$      |
| 1                | $\mu$    |
| - end of table - |          |

**eos.mr** : This file provides the gravitational mass (in solar masses), the radius (in km), and the tidal deformability of a family of stars computed for this unified RMF EoS model.
